Employee IT FAQ

Q: How do I reset my password if I am locked out? A: Use the Self-Service Password Reset (SSPR) link located on the login screen. You will need access to your secondary authentication method (SMS or Authenticator App) to verify your identity.

Q: Can I access my corporate email on my personal phone? A: Yes, but you must download the corporate Mobile Device Management (MDM) profile first. This creates a secure, encrypted workspace on your phone that separates company data from your personal data. Search for "MDM Setup" in the IT Portal for step-by-step instructions.

Q: How do I print to office printers? A: Ensure you are connected to the corporate Wi-Fi or VPN. Open the "Find Printers" application on your desktop, search for the printer name located on the physical machine's label, and click "Install."

Q: My laptop is running very slowly. What should I do? A: First, ensure you have completely rebooted your machine (not just closed the lid) within the last 48 hours. Check for pending OS updates. If the issue persists, submit a P3 ticket so a technician can review your system's performance logs.
