Laptop & Hardware Security Guidelines

Overview: Employees are responsible for the physical and digital security of their assigned corporate devices.

1) **Screen Locking:** You must lock your screen whenever you step away from your device, even for a moment. Use keyboard shortcuts: `Win + L` (Windows) or `Ctrl + Cmd + Q` (Mac).
2) **Physical Security:** Never leave your laptop unattended in public spaces (cafes, airports) or visible inside a vehicle. Use provided cable locks when working in shared or co-working spaces.
3) **Device Encryption:** All corporate laptops have full-disk encryption (BitLocker for Windows, FileVault for Mac) enabled by default. Do not attempt to disable this feature.
4) **Lost or Stolen Devices:** In the event a device is lost or stolen, report it immediately to the IT Helpdesk and your manager so a remote wipe can be initiated.
5) **Peripheral Devices:** Do not plug unknown or unauthorized USB flash drives into your corporate machine.
