Software Installation & Approval Process

Overview: To maintain system stability and security, users do not have local administrator rights to install unapproved software.

1) **Self-Service Portal:** Approved software (e.g., Slack, Zoom, Adobe Acrobat) can be downloaded directly from the internal Software Center / Self-Service app without IT intervention.
2) **Requesting Non-Standard Software:** If you require specialized software for your role, submit a "Software Request" ticket. You must include a business justification and written approval from your direct manager.
3) **Browser Extensions:** Only explicitly whitelisted browser extensions can be installed on corporate browsers.
4) **Prohibited Software:** Peer-to-peer file sharing clients, unapproved cloud storage syncing tools, and unauthorized remote desktop software are strictly prohibited and will trigger automated security alerts.
